### **RHEAD GROUP OFFSETS CARBON EMISSIONS FOR THE ANNUAL PIPELINE INDUSTRIES GUILD**

The Rhead Group has offset the carbon emissions associated with delegates travelling to and from the annual Pipeline Industries Guild on Tuesday 10<sup>th</sup> March 2009.

Rhead Group Chief Executive Office Nigel Curry comments: “We are strong supporters of the guild and the national dinner is a prestige event in our annual calendar. Some 1,200 people attended the dinner travelling from all corners of the globe. The carbon footprint associated with travel to the dinner was therefore fairly significant. Our contribution to offset the travel is just one of the environmental initiatives that we undertake each year.”

The initiative resulted in the planting of several trees in Warwickshire, home to our head quarters and in the North West where we have an office that supports our Northern and Scottish based clients.

“In addition we were able to participate with Emscote School where we donated several trees and hedgerows, supporting a healthier environment for the children and creating additional space for the local wildlife.”

“Jennie Leach one of our Environmental consultants and Linsey May one of our Health & Safety Consultants arranged for us to visit the school and help in planting the trees. It was a fantastic opportunity to work with the children and

extremely important for us as an organisation to be giving something back to our local community.”
